What's New in Power Platform:

- Canvas PowerApps makers get new screen properties for easier development of RESPONSIVE apps - <https://powerapps.microsoft.com/en-us/blog/new-properties-for-responsive-canvas-apps/>
- Canvas PowerApps makers will love Results View! - <https://powerapps.microsoft.com/en-us/blog/canvas-debugging-with-results-view/>
- Flow gets significantly improved trigger telemetry! Pay attention to connectors - Dynamics is simplifying the lineup - <https://flow.microsoft.com/en-us/blog/nine-new-connectors-in-april-and-improved-visibility-into-trigger-failures/>
- Canvas PowerApps makers get significantly updated experience working with icons in their apps - <https://powerapps.microsoft.com/en-us/blog/effortlessly-find-and-switch-between-icons-in-canvas-apps/>
- PowerApps Navigate function is simplified - <https://powerapps.microsoft.com/en-us/blog/more-small-steps/>
- Really nice enhancements to the model-driven #PowerApps forms designer - <https://powerapps.microsoft.com/en-us/blog/easily-add-and-move-fields-and-controls-on-a-form-using-drag-drop-and-cut-paste/>

What's New in CE:

- April Release for CE Marketing is now available (v1.35.4666.0) (remember to update from applications tab in admin center) - <https://docs.microsoft.com/en-us/power-platform/admin/preview-april-2019-updates#when-will-the-april-2019-features-be-enabled-for-customers-who-did-not-opt-in-to-the-preview>
- CE Marketing automatic segment creation using Flow - <https://cloudblogs.microsoft.com/dynamics365/it/2019/04/12/use-microsoft-flow-to-automate-tasks-in-dynamics-365-for-marketing/>
- Dynamics 365 sign-in uses a process to determine where to send a user to authenticate after they enter their username on the sign-in screen. This process will be updated with an upgraded user lookup behavior. The new behavior will make intelligent decisions by reading tenant and user level settings based on the username entered on the sign-in page. This will pave the path towards a password-less future by enabling alternative credentials like FIDO (Fast Identity Online) 2.0. After this change takes place, Microsoft will check to see if the username that is entered on the sign-in page exists in their respective domain before deciding where to redirect the user to provide their credentials. Additionally, this behavior will introduce new and improved error messaging on the sign-in pages if the username of the user entered does not match an account in the respective domain. This feature will begin rolling out for managed domains (cloud-only) in May 2019 and for federated domains by the end of 2019. ***If you or your organization have practices that depend on the old domain level HRD (Home Realm Discovery), it is important that you update the employee authentication documentation, train employees to use their actual username to sign in, and notify your helpdesk of this change.*** The exact roll out date for federated domains will be dependent on customer feedback. - <https://aka.ms/user-level-HRD/>
- Great blog post on matrix of email tracking options/settings needed - <https://community.dynamics.com/crm/b/crminthefield/archive/2019/04/23/dynamics-365-customer-engagement-how-to-choose-system-settings-and-personal-options-for-automatic-email-tracking>
- PowerApps Control Framework and CLI hit Public Preview - <https://powerapps.microsoft.com/en-us/blog/the-powerapps-component-framework-and-the-powerapps-cli-is-now-available-for-public>
